

Sentri™ end tidal CO₂ monitoring range

Masks and nasal cannula

Oxygen and Aerosol Therapy • Variable Oxygen Concentration (Low Flow)

Sentri™ end tidal CO₂ monitoring range

Capnography is vital during sedation

The increased use of conscious sedation has created a need for devices to monitor respiratory depression. The difference between conscious sedation and general anaesthesia is sometimes very small. It is possible during conscious sedation that intravenous sedatives and narcotics administered to allay apprehension can result in the loss of consciousness and respiratory obstruction.

Mask or nasal cannula the choice is yours

Sentri is available as an adult mask and in three sizes of nasal cannula. Both permit the sampling of exhaled carbon dioxide in non-intubated patients during the administration of supplementary oxygen.

www.intersurgical.com/info/sentri

Nasal cannula available in three sizes

To accommodate a wide range of patients from infant to adult

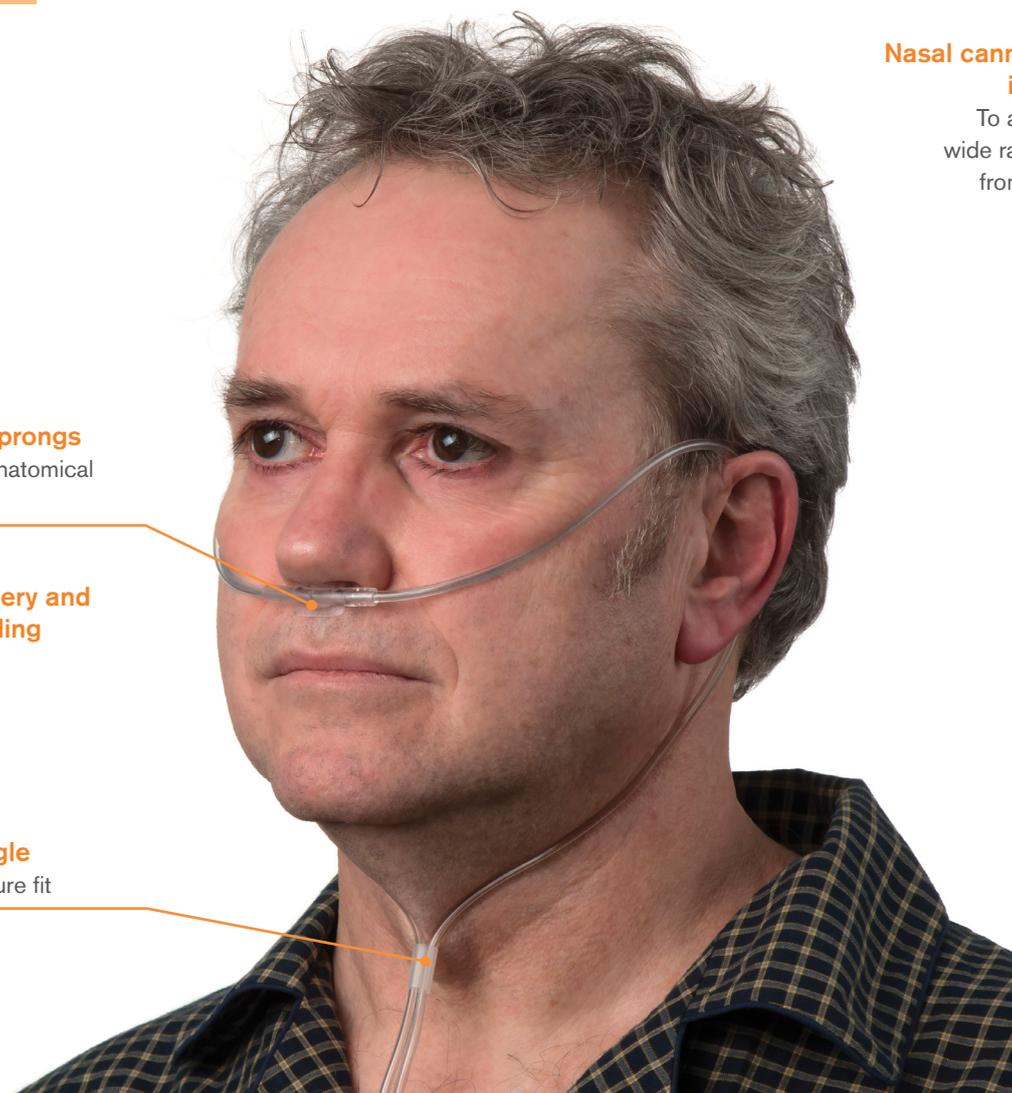

Soft, curved prongs

For improved anatomical fit and comfort

Oxygen delivery and ETCO₂ sampling

Non-slip toggle

Provides a secure fit

By delivering oxygen through one prong and sampling exhaled gas from the other, the nasal cannula can provide end tidal CO₂ values comparable to those achieved with intubated patients. Nasal cannula may be more appropriate for paediatric patients when high oxygen flows may “dilute” the CO₂ sample and give a low (or no) value. A face mask may be more appropriate when the nares are occluded or obstructed.

Sentri™ Intersurgical EcoLite™ mask kit

The Sentri Intersurgical EcoLite™ mask has been designed as part of our ongoing focus on sustainable development, which is an integral part of our ethos.

The Intersurgical EcoLite range of masks provide an option with a significantly lower impact on the environment.

By utilising the latest technology we have combined two materials: the first forming the clear rigid shell of the mask, this provides a strong lightweight body with good visibility, whilst the second softer material forms the seal, providing a comfortable fit for a wide variety of face shapes.

Incurved nose seal

Conforms to different nose shapes designed to prevent oxygen entering patient's eyes

No metal nose clip

MRI compatible

Multi-channel oxygen tube

Oxygen still flows even if tube is kinked

Luer lock port

Secure ETCO₂ monitoring line connection

Elastic can be positioned under or over the ears

Below ear position eliminates trauma to top of ears

Soft face seals

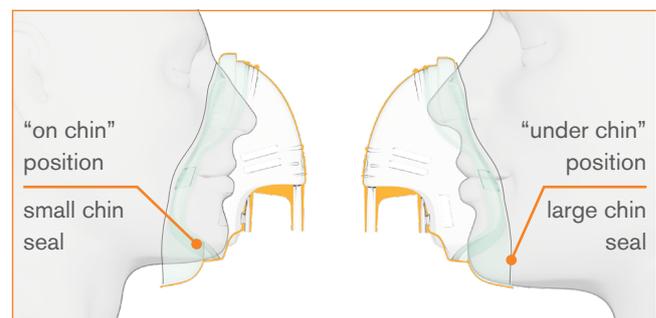

Increased patient comfort

A choice of "under chin" or "on chin" positions

Provides a better fit on a wider range of patient face shapes

Two integral chin seals ensure the mask fits a wider range of patient face shapes

Comfortable for the environment

Various groups have questioned the use of PVC in medical products and its impact on the environment. Intersurgical's aim is to reduce the environmental impact of its products and processes. The utilisation of new materials and the latest manufacturing technology has resulted in the elimination of PVC from the mask shell resulting in a reduced environmental impact.
